CORPORATE ENVIRONMENTAL MISSION STATEMENT

Hussey Copper is committed to operating its facilities in compliance with federal, state, and local regulations and continually striving to reduce environmental impacts.

Hussey Copper works to continually improve the effectiveness of the Environmental Management System at its facilities, and recognizes that continual improvement of the environmental programs at the company is a necessary core business practice. Minimizing environmental incidents is a facet of the plant-wide operational efficiency initiatives, and ensuring that employees and contractors are aware of the impact that environmental issues can have is crucial to the success of these initiatives.

Hussey Copper repeatedly evaluates environmental performance, and works to reduce environmental impacts by setting and working towards measurable improvement goals. Hussey Copper operates appropriate pollution control equipment, is committed to provide necessary manpower in order to maintain these systems, and strives to prevent unacceptable releases to the land, air and water surrounding our facilities. Hussey Copper also operates a robust waste management program, which analyzes each byproduct produced at the facility to determine if the materials can be recycled and reused, rather than disposed.

Employees are made aware of unacceptable environmental conditions and are instructed to report potential environmental hazards. Practices at the facility that could produce negative environmental impacts will not be tolerated. Anyone deliberately performing actions which do not align with the corporate environmental policy will be disciplined accordingly.

Hussey Copper realizes that the foundation of our business is built on a recycling operation which facilitates the reuse of our natural resources. Hussey Copper strives to maintain this mentality in all aspects of our business and is fully committed to reducing waste, minimizing the impact of spills, operating in compliance with its air and water permits, and continuously improving the quality of stormwater leaving its facilities.
